(54) Title: METHOD AND SYSTEM USING CONDITIONAL BLOCKING AND NON-BLOCKING QUERY CALL SYSTEM
AND METHOD

FIG. 2

(57) Abstract: A method performed by at least a user device comprising an interaction application and a biometric application is disclosed. The method comprises receiving from an access device, a message comprising interaction details. The user device may perform a biometric verification of the user operating the user device. The method may then include, if the biometric application has a biometric verification result, the interaction application receives the biometric verification result from the biometric application and continues processing the message. Or if the biometric application does not have the biometric verification result, then the interaction application either waits for the biometric verification result from the biometric application or continues processing the message without the biometric verification result.
