

ABSTRACT

The embodiments of the present disclosure provide a method and apparatus for installing device application. The method is applied in an edge device and includes: receiving an application package issued by a cloud, wherein the application package comprises application resource files respectively corresponding to a plurality of applications; in response to determining that a verification for the application package is passed, installing at least one application on the edge device based on the application resource files. In this method, only one application package is needed for installation, which can improve the efficiency of installing and deploying application software on the device.
