(54) Title: SKATEBOARD WITH DIRECTION-CASTER

(57) Abstract: Disclosed herein is a skateboard having a front board, a rear board and a connecting element which interconnects the front board and the rear board in a spaced relationship, wherein at least one of the front board and the rear board has one or more than one direction-caster which is mounted on the underside of the plate of the boards. The connecting element has elastic matter in it so that it can be elastically twisted or bent when it receives twisting or bending force and can be restored to its original shape when the force is removed. With this skateboard, the rider can easily turn within a small turning radius, and driving force can be generated by the rider's twisting motion without moving his/her feet.
