Abstract

The invention relates to the use of carbocyclically and heterocyclically fused dihydropyridines of the formula

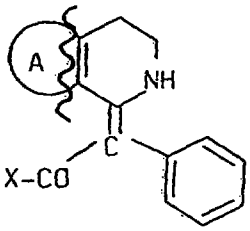

I

and the tautomeric forms of formula II

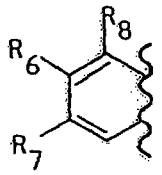

II'

or

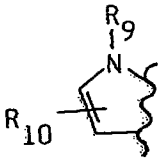

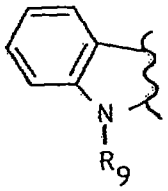

II''

wherein A represents the fused ring systems

and X represents OR_1, NHR_2 or NR_3R_4 as cerebroprotective agents, as agents for treating chronic inflammatory

processes and as agents for inhibiting blood clotting. The invention also relates to the new compounds of formula Ie (as defined herein) which are covered by general formula I given hereinbefore.
