

**DISC DRIVE WITH DELAYED
REASSIGNMENT WRITE**

ABSTRACT OF THE DISCLOSURE

5 A method of writing to a disc in a disc drive includes
receiving data to be written to a designated area of the disc
wherein the designated area has a beginning, an end, and
contains a defective portion. The data is written to the disc
starting from the beginning of the designated area and proceeding
10 toward the end of the designated area. The data is written to a
temporary buffer, external to the disc, upon reaching the defective
portion of the designated area. Writing is then resumed, writing
data to the designated area of the disc, upon passing the defective
portion of the designated area.
