Abstract

The present invention provides an antibody or an antigen-binding fragment thereof that can specifically bind to a DLL3 protein, e.g., a human DLL3 protein. The present invention also provides a multispecific binding molecule, e.g., a multispecific antibody, that specifically binds to DLL3 and one or more tumor-associated antigens. The present invention further provides a nucleic acid molecule encoding the antibody, an expression vector for expressing the antibody, a host cell, and a preparation method therefor. The present invention also provides methods of diagnosis and treatment using the antibodies of the invention.
