MAILBOX ASSEMBLY AND METHOD FOR AUTOMATED DISTRIBUTION OF MAIL ITEMS

Abstract

The present disclosure generally relates to a mailbox assembly and a method for automated distribution of mail items. The mailbox assembly comprises storage units for storing mail units, each mail unit comprising an identifier label and mail items addressed to a mailing address. The mailbox assembly comprises a collection region and a transportation unit moveable within the mailbox assembly for scanning the identifier labels, and for transferring the mail units from the storage units to the collection region for collection by the user.
