(54) Title: A BUILDING CONNECTION COMPRISING A FIRST BUILDING ELEMENT AND A SECOND BUILDING ELEMENT

FIG. 3

(57) Abstract: A building connection (10) is described comprising a first building element (12) and a second building element (30) arranged at a distance from each other, the first building element (12) being connected to the second building element (30) by at least one connecting device (15). The connecting device (15) comprises a load transfer element (24) arranged in the first building element (12), and a support box (33) molded into the second building element (30) and comprising an inner bottom wall surface (38) and a support box opening (34) facing the first building element (12). The connecting device (15) further comprises a first sound-absorbing element (52) arranged on the inner bottom wall surface (38) of the support box (33), and a support plate (58) arranged on top of the first sound-absorbing element (52). The load transfer element (24) projects from the first building element (12) and into the support box (33) through the support box opening (34) and a filling area (60), comprising the support box (33) and an area between the first building element (12) and the second building element (30), is molded with a filling material (61).
