ABSTRACT

WINDOW WITH MULTI-WAY FOR OPENING

The invention discloses a window with multi-way for opening, which can be in pull/push and opened outwards even in pull/push process through elements like sliding pipes etc. There are frame assembly and sash assembly. Each horizontal frame has a cavity with an opening, a guide track for sliding mounted on the bottom slab, and a pair of subsidiary guide tracks provided on the side slabs. Several roller devices are arranged along sliding pipe assembly and matched with the guide track and subsidiary guide track of the horizontal frame. Therefore, the sliding pipe assembly can be moved along the horizontal frame. Furthermore, a hinge assembly fastened to the sliding pipe is provided in one of the stile of sash assembly to be used for supporting rotation of the sash assembly.
