

STRUCTURE WITH LIGHT FOR ILLUMINATING FUNERARY URNS HOUSED THEREIN

ABSTRACT

5

A niche structure of columbarium includes a plurality of illumination assemblies comprising a light source; a plurality of rectangular niches each surrounded by the illumination assemblies by threadedly fastening the illumination assemblies therearound; and a plurality of boxes each for storing an urn and removably disposed
10 in the niche. Light emitted by the light source brings about a starry night effect. An LED device is provided in the box such that closing door of the box will cause the LED device to emit light toward the door.
