Resolution of Ties

Demonstration using a pool of just 100 participants (resulting in numerous ties)

In this example we need to resolve ties so we have a unique 1-30 ranking. This is to be done as follows:

- If the number of hits on tied numbers is an even number (e.g. 2 hits) then order the tied numbers as follows: - the lowest value of the chosen number gets the first placing and so forth.
- And conversely, if the number of hits on the tied numbers is an odd number, then the tied numbers as follows: - the highest face value of the chosen number gets the 1st placing as so forth.

CHOSEN PRIMARY NUMBER	HITS	RANK	CHOSEN PRIMARY NUMBER	RANK	HITS	TIE BREAK	FINAL RANK	CHOSEN PRIMARY NUMBER	WINNER
1	3	14	2	1	1	ODD	1 st	27	
2	1	1	5	1	1	ODD	2 nd	19

START

FINISH

Yes, there have been a lot of players this week, from 45 different countries. Some popular picks for the least chosen numbers have been 1, 13 and 19. But we also have our perennial favourites such as 10 and 14, which are culturally unlucky numbers in Chinese culture.

Yessir! 4 means death in Chinese culture, which means a lot of bad luck. You folks know that because that's such a bad number in Asia, there's a high chance that it's the least picked number. But, there's also a lot of you that are thinking the same strategy.

TOTAL PRIZE: \$24,698,098

Our systems have done the scoring and Congratulations to J. Heath of Australia - you have won the SuperVivo grand prize!!! That's \$24.6 Million US dollars - one of the largest jackpots in the world. We will be in contact very shortly, so hold on to your kangaroos! Talk about some great luck maaaaaio. To all you other players, the results are being updated to our scoreboard as we speak. Check out the results and get your numbers for next week. See you next week, same time, same place for SuperVivo!

SuperVivo - The World's Best Odds!

WINNER'S PRIZE

M
i'm lovin' it

No. 6

Driven by the enigmatic space bounty hunter, Kelly Santiago, No. 6 is a third generation Viper shuttle powered by hyper-warp engine, powered by 12 titanium-torque pistons. Kelly is an unstoppable force of nature and is a pro at dodging asteroids. She's supported by her loyal crew of space bounty hunters - The Loveless Pirates. Underestimate her at your own peril.

ABOUT THE SHUTTLES

Every race, there's a flight, on our top vehicles approached the right way.

Let's look at our contingent of racers more closely... one of the top contenders to watch-out for this race is No. 6, driven by the enigmatic space bounty hunter, Kelly Santiago. Kelly is an unstoppable force of nature and is a pro at dodging asteroids. I personally know quite a few pilots that would shake at the sight of her.

NUMBER RANGE POOL (1 to 'n')

Figure 7a

Calculating the odds explained: Permutations without repetition

The order of chosen numbers is significant in this system and is referred to as a permutation without repetition.

“A permutation is any set or subset of objects or events where internal order is significant.”

Permutation without repetition example:

- Picking 4 numbers without repetition (r)
- from a pool of numbers ranging from 1 to 7 (n)

$$= \frac{n!}{(n-r)!} = \frac{7!}{(7-4)!} = \frac{7!}{3!} = \frac{7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1}{3 \times 2 \times 1} = \frac{5040}{6}$$

$$46/64$$

$$= 840$$

Alternatively, simply calculate the factorial result by multiplying by the quantity of picked numbers. In this case 4 times:

$$7 \times 6 \times 5 \times 4 = 840$$

Refer to the chart on Fig 7a to confirm results.

Figure 7c

Calculating the odds explained: Combinations without repetition

This method is used by most gaming and Lottery operators. The numbers are drawn one at a time and the order is not significant.

“A combination is any set or subset of items, regardless of their internal order.”

Combination without repetition example:

- Picking 4 numbers without repetition (r)
- from a pool of numbers ranging from 1 to 7 (n)

$$= \frac{n!}{r!(n-r)!} = \frac{7!}{4!(7-4)!} = \frac{7!}{4! \times 3!} = \frac{7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1}{4 \times 3 \times 2 \times 1 \times 3 \times 2 \times 1} = \frac{5040}{144}$$

$$48/64$$

$$= 35$$

Alternatively, simply multiply the number range by the quantity of chosen numbers then divide by the factorial of the number of chosen numbers.
In this case 4 times:

$$\frac{7 \times 6 \times 5 \times 4}{4 \times 3 \times 2 \times 1} = \frac{840}{24} = 35$$

Refer to the chart on Fig 7c to confirm results.

Figure 7d

49/64

Ranking system based on all number picks

Example: 500,000 participants picking 6 numbers from a range of 1 - 20.
