

**METHOD AND SYSTEM FOR DYNAMICALLY POSITIONING A PIN ENTRY
BOX IN A TERMINAL DISPLAY**

Abstract

The present invention provides a system that comprises a random number generation algorithm, where the random number generation algorithm is able to generate a random number in association with a GET HTTP request from a Terminal Device and the generated random number is associated with a baseline reference of a PIN Entry Box, so that the PIN Entry Box is dynamically displayed with the proper time delay to display on a terminal display of the Terminal Device. The present invention also provides a method of dynamically positioning the PIN Entry Box on the terminal display using the random number generation algorithm.
