

ABSTRACT

An adhesive optical film (50) includes: an optical film (11) having a first principal surface and a second principal surface; a first pressure sensitive adhesive layer (21) disposed on the first principal surface; and a second pressure sensitive adhesive layer (22) disposed on the second principal surface. The first principal surface of the optical film includes an adhesive-free area (2x) where the optical film is exposed without being covered with the first pressure sensitive adhesive layer, and an adhesive area where the first pressure sensitive adhesive layer is disposed on the optical film. The adhesive-free area lies, for example, along the peripheral edge of the optical film.
