

ABSTRACT

The present disclosure relates to the field of therapeutic antibodies, and specifically, to a pharmaceutical composition comprising an antibody, a buffer solution, and an additional excipient. The pharmaceutical composition can maintain the stability of the antibody after long-term storage and can be directly infused, thereby facilitating clinical use. In the pharmaceutical composition, the antibody component is present at a high concentration, thus featuring convenience of storage and transport and cost-efficiency. In addition, the present disclosure further relates to use of the pharmaceutical composition in preparing a medicament for the prevention and/or treatment and/or adjuvant therapy and/or diagnosis of a tumor.
