The diagram shows a 'Sign In' form within a 'paper digest' header. The form is titled 'Sign In' and contains the following elements:

- S1:** A dashed box enclosing the 'Email Address' and 'Password' input fields.
- S2a (S2):** A label pointing to the 'Sign In (Supervisor)' and 'Sign In (Student)' buttons.
- S2b (S2):** A label pointing to the 'Sign In (Supervisor)' button.
- Create Account:** A button located below the sign-in buttons.

The form is structured as follows:

paper digest

Are university rankings useful to improve research? A systematic review

Vernon, Balas, Momani *PLOS ONE* 2018
Full text link: <https://doi.org/10.1371/journal.pone.0193762>

What this paper is about

Introduction and Objective

- Research quality issues exist within university research; in the last 10 years, several studies and commentaries have highlighted the need for improvement in transparency, replicability, and meaningful research outcome reporting.
- Many university administrators rely on university ranking systems as indicators of improvement over time and in comparison to other institutions.
- Assessment of the validity of research and academic quality indicators in university rankings is often unexplored; only once in the literature were two ranking systems so evaluated.

What you can learn

Results

- Thirteen ranking systems which published in 2015 or 2016 were included in the results.
- Diversity of faculty and students are also used by QS World, Times, UMR and RUR as indicators of academic quality.
- The suitability of ranking systems for use in research performance improvement is reported in.

Discussion and Conclusions

- Valid measures of academic quality are not universally standardized.
- Research expenditure is often used an indicator of the strength and quality of an institutions research capabilities.
- While we believe this represents a comprehensive analysis of appropriate ranking systems, other institutions may rely on different systems.
- There is a need for a credible quality improvement movement in research that develops new measures, and is useful for institutions to evaluate and improve performance and societal value.
- Current indicators are inadequate to accurately evaluate research outcomes and should be supplemented and expanded to meet standardized criteria.
- We suggest that future research evaluate three dimensions of research outcomes: scientific impact, economic outcomes, and public health impact for evaluating research performance within an academic institutional environment.
