(54) Title: MULTIMEDIA DATA PROCESSING METHOD AND APPARATUS, AND ELECTRONIC DEVICE

(54) 发明名称: 多媒体数据处理方法、装置及电子设备

S201 Detect whether a shielding instruction for playback multimedia data is received, the shielding instruction instructing to perform shielding processing on multimedia data of which the target parameters satisfy a preset condition

S202 If the shielding instruction is received, detect the target parameters in multimedia data to be played back, and if the target parameters in the multimedia data to be played back satisfy the preset condition, perform shielding processing on the multimedia data to be played back

(57) Abstract: The embodiments of the present disclosure provide a multimedia data processing method and apparatus, and an electronic device. Said method is performed by a terminal device, and specifically comprises: detecting whether a shielding instruction for playback multimedia data is received, the shielding instruction instructing to perform shielding processing on multimedia data of which the target parameters satisfy a preset condition; and if the shielding instruction is received, detecting the target parameters in multimedia data to be played back, and if the target parameters in the multimedia data to be played back satisfy the preset condition, performing shielding processing on the multimedia data to be played back. The embodiments simplify the operation process of a user shielding multimedia data that may induce physical discomfort, improving the user experience, and being able to avoid harm to users.
