

METHOD FOR PRODUCING SPUNLACE NON-WOVEN CLOTH, METHOD FOR
PRODUCING SPUNLACE NON-WOVEN CLOTH WITH X-RAY DETECTABLE
ELEMENT, SPUNLACE NON-WOVEN CLOTH WITH X-RAY DETECTABLE
ELEMENT PRODUCED THEREBY

ABSTRACT

A method for producing spunlace non-woven cloth includes the following steps:
clearing cotton—carding—spreading the web—water
jetting—bleaching—drying—rolling the finished products. This method improves the
good ratio of the finished products of the whole procedure, reduces the producing cost,
economizes raw materials and save the power as well as reduces the impurity content
of products and ensures the hygiene of finished products and greatly reduces the
bacteria content. Moreover, the direct products of the present invention have the
advantages of being soft, having good skin tolerance, no toxic, no stimulation, no
sensibility, having good absorbency, convenient and comfortable to use.
