(54) Title: METHOD AND SYSTEM FOR COORDINATING CLIENT AND HOST SECURITY MODULES

(57) Abstract: A system and methods for coordinating the operation of a client security module and a host security module on a mobile electronic device. The modules communicate with each other through a platform abstraction layer using application programming interfaces to coordinate their activities. In particular, the client security module instructs the host security module when to lock and unlock the device, and the host security module alerts the client security module to attempts by the user to lock or unlock the device.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
