ALKOXYLATED SECONDARY ALCOHOL

ABSTRACT

The invention relates to a compound of formula (I) below:

(I)

in which:

- the groups R_1 and R_2, which may be identical or different, represent, independently of each other, a linear, branched or cyclic, saturated or unsaturated hydrocarbon-based group, comprising from 1 to 6 carbon atoms, it being understood that the sum of the carbon atoms of the groups R_1 and R_2 ranges from 2 to 7, the groups R_1 and R_2 may also form, together with the carbon atom that bears them, a 6-, 7- or 8-membered ring,
- n is an integer between 1 and 100, limits inclusive,
- A represents a sequence of one or more units chosen from ethylene oxide, propylene oxide and butylene oxide units, and mixtures thereof,
- the group formed by R_1, R_2 and the carbon atom to which R_1 and R_2 are attached has a degree of branching equal to 0, 1 or 2 and

The invention also relates to the process for preparing same, to the uses thereof and to compositions containing same.
