

ABSTRACT

A building of a nursing facility or a medical facility includes: a plurality of private rooms (10A to 10I); a common hallway (131 and 231) connecting the private rooms (10A to 10I); a toilet (30A to 30G) provided to a part of the private rooms of the plurality of private rooms (10A to 10I) and allowing entrance from and exit to said part of the plurality of private rooms without passage through the common hallway; and a filth treatment room (40A to 40E) adjacent to the toilet and allowing direct entrance from and exit to the toilet, in which the filth treatment room has an exit allowing exit to the outdoors without passage through the common hallway. As a result, it is possible to prevent spreading of a pathogen or an odor caused by bringing clothes or the like to which dirt is stuck into a common hallway.
