

ABSTRACT

Provided are: a fluorine rubber composition which contains a hydrogen atom-containing fluorine rubber and a hydrogen atom-containing fluoro-resin; a
5 crosslinked rubber molded body which uses this fluorine rubber composition; and a method for producing this crosslinked rubber molded body. It is preferable that the hydrogen atom-containing fluoro-resin is composed of at least one compound that is selected from the group consisting of polyvinylidene fluorides, vinylidene
10 fluoride-hexafluoropropylene copolymers, tetrafluoroethylene-ethylene copolymers and vinylidene fluoride-hexafluoropropylene-tetrafluoroethylene copolymers.
