

PROCESS FOR RECOVERING NOBLE PRODUCTS IN A PROCESS FOR PRODUCING
DIALKYLAMINOALKYL (METH)ACRYLATES

ABSTRACT

5

10

The present invention relates to the manufacture of dialkylaminoalkyl (meth)acrylate, in particular N,Ndimethylaminoethyl acrylate, by transesterification reaction of an alkyl(meth)acrylate with an amino alcohol, and the subject matter thereof is more particularly a process for recovering the heavy by-products generated during this manufacture, enabling the recycling of noble products on the dialkylaminoalkyl (meth)acrylate purification unit.
