(54) Title: METHOD AND SYSTEM FOR PROCESSING DATA PACKAGES

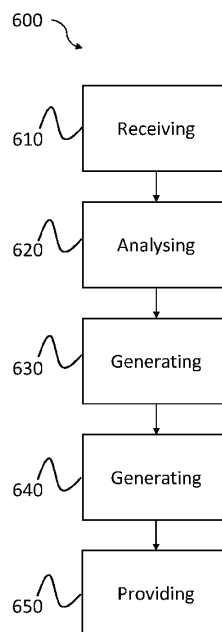

Fig. 7

(57) Abstract: A method (600) for analysing data received by an addressed recipient of a data package (100). The method comprises receiving (610) a data package (100) over a data network (230). The data package (100) comprises a header (110) and payload data (120). The header (110) of the data package (100) is analysed (620) to determine a plurality of characteristics, the characteristics comprising at least an identifier and a transmission time. The method also comprises generating (630) a risk indicator, wherein the risk indicator indicates a risk associated with the analysis of the header (110). A handling action is generated (640) based on the risk indicator; and provided (650) along with the payload data (120) to the addressed recipient.
