REFRIGERATOR

ABSTRACT

To provide a refrigerator including a user-friendly operation device in which a user can operate at ease.

A refrigerator includes an icon block 25 that has icons and receives an operation input, a function display unit 26 that, when the icon block 25 is operated, displays characters explaining a function associated with an icon of the icon block 25, an input receiving display unit 27 that, when the icon block 25 is operated, displays indication of whether to implement the function associated with the icon of the icon block 25 and receives an input indicating a determination to or not to implement the function, and a setting display unit 29 that, when the input receiving display unit 27 receives the input indicating the determination to implement the function, displays characters indicating that the implementation of the function is set.
