A LIQUID DISPENSING APPARATUS

G00002

Abstract:

5

A dispensing apparatus for use in dispensing liquid in a measured quantity or dosage comprising a tubular body consisting of a reservoir portion
10 telescopically received within a dispensing portion and valve means arranged between the reservoir portion and the dispensing portion, said valve means being arranged to be opened to allow liquid to pass, under gravity, from the reservoir portion to the dispensing portion by telescopically sliding away the reservoir portion away from the dispensing portion. The dispensed portion will
15 contain a preferred measure of liquid. The apparatus is disposable and is therefore hygienic. It is also constructed from biodegradable plastic material.
