(54) Title: DISPENSING DEVICE FOR FOOD PRODUCT

(57) Abstract: The invention relates to a dispenser for viscous fluid food product, the dispenser comprising: a housing (12) configured and dimensioned for receiving a food pouch (4); the pouch is of the type of a pouch having first and second ends, a sidewall that can be arranged to form first and second opposed surfaces (410, 411), and an outlet (40), the pouch being capable of containing a viscous fluid food product therein; means for pressing the pouch so as to urge the viscous fluid food product content toward the outlet; wherein the means comprises a roller (30) having a pressing surface disposable in a position adjacent the first surface (410) of the pouch and a planar surface (21) disposed adjacent the second surface of the pouch, closure means (9, 84) engaged with the outlet (40) for closing the outlet, the means being capable of opening the outlet so as to cause the roller (30) to move along the pouch surface toward the outlet by gravity for expelling the viscous fluid food product through the outlet.
