

A B S T R A C T

BORING MACHINE PROVIDED WITH FOUR BORING MEMBERS

5 The invention provides a boring machine (10) for
making a trench (T) in soil (S), the machine comprising a
frame (12) that extends along a longitudinal direction
(A), said frame (12) carrying a boring device (20)
provided with four rotary boring members driven by four
10 motors about axes of rotation that are stationary
relative to one another.
