CLAIMS

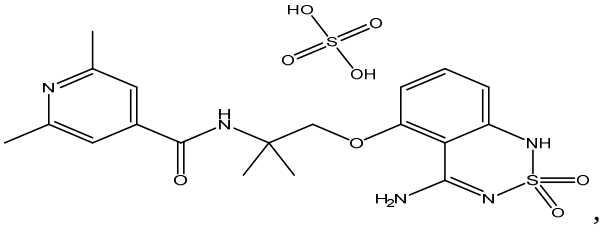

1. A composition comprising 2,4-dihydroxybenzoic acid and a positive allosteric modulator, wherein the positive allosteric modulator is selected from the group consisting of:

,

,

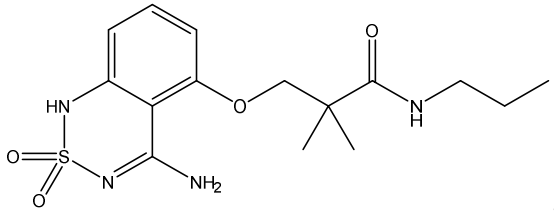

,

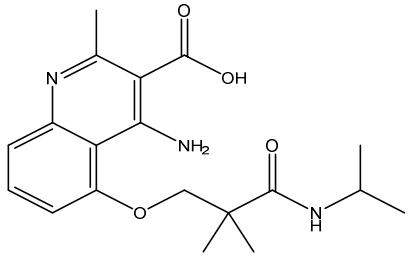

and combinations thereof, wherein the 2,4-dihydroxybenzoic acid is present in an amount from 0.1 to 10 ppm and the positive allosteric modulator is present in an amount from 0.015 to 15 ppm.

2. The composition of claim 1, further comprising a carrier.

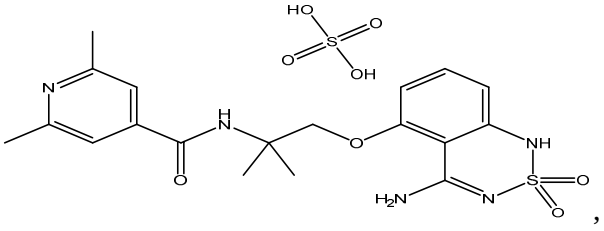

3. A sweetened composition comprising at least one sweetener and taste modifier composition comprising 2,4-dihydroxybenzoic acid and a positive allosteric modulator, wherein the positive allosteric modulator is selected from the group consisting of:

,

,

,

and combinations thereof, wherein the 2,4-dihydroxybenzoic acid is present in an amount from 0.1 to 10 ppm and the positive allosteric modulator is present in an amount from 0.015 to 15 ppm.

4. The sweetened composition of claim 3, wherein the sweetener is a natural sweetener.

5. The sweetened composition of claim 4, wherein the natural sweetener is selected from fructose and sucrose.

6. The sweetened composition of claim 5, wherein the natural sweetener is sucrose.

7. The sweetened composition of claim 6, wherein sucrose is present in an amount of 1% to 11%.

8. The sweetened composition of claim 7, wherein sucrose is present in an amount of 1.5% to 10%.
