

MANAGEMENT APPARATUS OR DEVICE INFORMATION TRANSMITTING APPARATUS

ABSTRACT

5 A management apparatus (30) communicates with a control terminal (20) via a
communication network under a predetermined communication condition. The control
terminal (20) transmits device information about an air conditioner (10). The management
apparatus (30) includes a communication quality measuring unit, a communication quality
determining unit, and a reduction control unit. The communication quality measuring unit
10 measures communication quality in the communication network. The communication quality
determining unit determines a degree of decrease in the communication quality. The reduction
control unit executes reduction control in accordance with the degree of decrease in the
communication quality. In the reduction control, the reduction control unit changes the
communication condition in accordance with a degree of priority of each of pieces of
15 information transmitted between the control terminal (20) and the management apparatus (30).
