(54) Title: PROCESSING COMMODITY TRANSACTION AND LOGISTICS SOLUTION

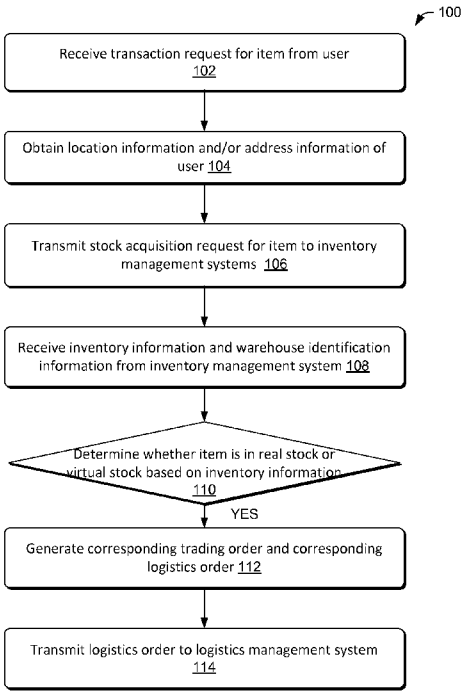

FIG. 1

(57) Abstract: Implementations herein relate to method and systems for processing transactions, managing logistics orders, and managing an inventory management system. A method may include receiving, by a computer device, a transaction request for an item from a user. The computing device may obtain location information and/or address information of the user and transmit a stock acquisition request for the item to an inventory management system. The stock acquisition request may include the location information and/or the address information of the user. The computing device may further receive inventory information and warehouse identification information from the inventory management system and determine that the item is in real stock or virtual stock based on the inventory information. If the item is in real stock or virtual stock, the computing device may generate a corresponding trading order and a corresponding logistics order and transmit the logistics order to the logistics management system.
