ABSTRACT

"Method and system for rebalancing a facility for the shared use of vehicles, facility implementing such a method and/or system"

The invention relates to a method (200) for rebalancing vehicle collection/return stations, said method (200) comprising the following steps:

- for each station, determining (204):
  - a number of vehicles available at said station,
  - an average waiting time at the station, and
- filtering (206) the stations as a function of said parameters, said filtering (206) providing:
  - a first list, said departure station list, and
  - a second list, said arrival station list,
- designing (208) at least one vehicle movement operation as a function of said lists, and
- carrying out (214) at least one vehicle movement operation.
