(54) Title: ORIFICE REDUCER FOR MULTI-COMPARTMENT CONTAINER

(57) Abstract

The present invention is an orifice reducer for a two or more compartment container having a single neck finish. The reducer comprises a plate having two or more apertures, an upper surface, a lower surface, and an outer edge. The two or more apertures are positioned to align with the two or more compartments of the container. The apertures may be of different sizes to allow for the proper dispensing of the different phases of product contained within each compartment of the container.
