

ABSTRACT

CAPABILITY CONTROL METHOD, TERMINAL, AND NETWORK-SIDE NETWORK ELEMENT

The present disclosure provides a capability control method, a terminal and a network-side network element. The capability control method includes: determining whether a predetermined condition has been met, the predetermined condition including at least one of a condition where a terminal capability changes, a condition where a terminal position changes, a condition where a card in the terminal is deleted, a condition where a card is newly added in the terminal, and a condition where the terminal does not support capability signaling optimization after the position has changed; and when the predetermined condition has been met, performing a first related operation of the terminal capability.
