

DEODORIZING AEROSOL

ABSTRACT

5 Provided is a deodorizing aerosol capable of exerting a highly fast-acting and long-lasting deodorizing effect in a treatment space such as a toilet room. A deodorizing aerosol comprising: a pressure-resistant container equipped with a metering spray valve, the container containing a liquid
10 aerosol-forming material including a deodorizing component and an organic solvent, and a propellant; and a spray button having a spray outlet connected to the metering spray valve. The deodorizing aerosol is adjusted so that the spray volume by pushing the spray button once is 0.1-0.4 mL, and the spray
15 force of the liquid aerosol-forming material sprayed by pushing the spray button once is 0.3-10.0 g·f as measured at a distance of 20 cm from the spray outlet at 25°C. The deodorizing aerosol is configured so that 50 vol% or more of the liquid aerosol-forming material sprayed by pushing the
20 spray button once from the pressure-resistant container into a treatment space of 2.5-3.5 m³, forms adhesive particles that adhere to an exposed portion in the treatment space in 60 minutes or less.
