

ABSTRACT

A method for controlling a virtual object, and a related apparatus. The method comprises: displaying a user interface, the user interface comprising a virtual environment picture and an interactive panel area, and the virtual environment picture being a picture of observing a virtual environment from the perspective of a virtual object (401); receiving a shortcut operation on a target area on the user interface, the target area comprising an area which belongs to the virtual environment picture and does not belong to the interactive panel area (402); and controlling the virtual object to perform a corresponding activity in the virtual environment according to the shortcut operation (403). By providing a target area in a user interface, a user can control a virtual object to perform a corresponding activity by performing a shortcut operation in the target area. The user can control the virtual object to perform the corresponding activity in the virtual environment according to the shortcut operation, without triggering a UI control corresponding to the activity and memorizing the function and position of the UI control.
