(54) Title: DOUBLE ROW MODULAR GANG JACK FOR BOARD EDGE APPLICATION

(57) Abstract

Disclosed is a double row modular gang jack (10) for board edge application. A plurality of vertical walls (18, 20) are interposed between first and second longitudinal horizontal walls (12, 14), and another plurality of vertical walls (22, 23) are interposed between the second and third horizontal longitudinal walls (14, 16). Parallel rows of plug receiving recesses (21, 24) are consequently formed between the first and second (12, 14) and the second and third (14, 16) longitudinal horizontal walls. One of the longitudinal walls (16) extends transversely beyond the edges of the other two (12, 14) to enable the plugs inserted in the row of the plug receiving recesses to be superimposed over the plugs inserted in the other row of plug receiving recesses.
