

ABSTRACT

A protective film formation sheet having a protective film formation layer provided on a support sheet and a release film provided on the protective film formation layer, wherein the surface roughness of a surface of the support sheet on the opposite side from the side on which the protective film formation layer is provided is not more than $0.5\ \mu\text{m}$, and the static friction force, measured in accordance with JIS K7125, between the aforementioned surface of the support sheet and a surface of the release film on the opposite side from the side on which the protective film formation layer is provided is not more than 29 N.
