(54) Title: A TRANSIT DEVICE FOR LEADING ONE OR MORE CABLES AND/OR PIPES THROUGH AN OPENING IN A PARTITION

Fig. 5

(57) Abstract: A transit device (10) for leading one or more cables (11) and/or pipes through an opening in a partition (12), wherein the transit device (10) comprises an extension frame (20) connectable to a mounting frame (19) and/or the partition (12) and having an axially extending through opening for the cables and/or pipes. The extension frame (20) comprises a plurality of extension frame modules (29), each extension frame module having a first end, a second end and axially extending edge portions extending between the first end and the second end. The axially extending edge portions are provided with connection elements (30), wherein the extension frame modules (29) are connectable to each other through the connection elements (30) to form the extension frame (20), and the first end of said extension frame modules (29) is provided with a fastening element (35) for fastening to the mounting frame (19) and/or the partition (12).
