Fig. 1

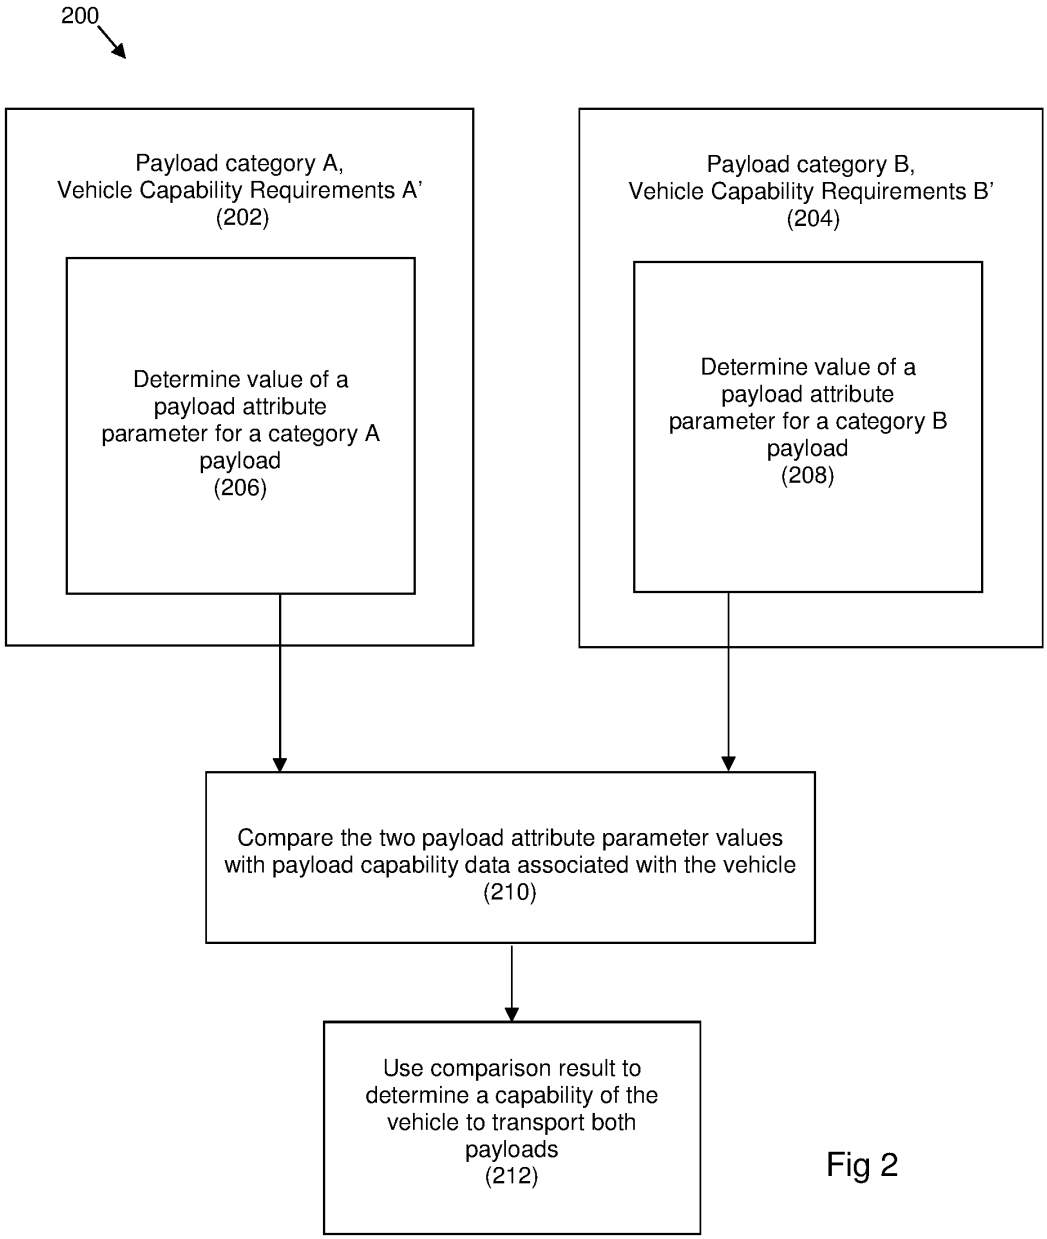

200
Payload category A,
Vehicle Capability Requirements A'
(202)
Determine value of a payload attribute parameter for a category A payload
(206)
Payload category B,
Vehicle Capability Requirements B'
(204)
Determine value of a payload attribute parameter for a category B payload
(208)
Compare the two payload attribute parameter values with payload capability data associated with the vehicle
(210)
Use comparison result to determine a capability of the vehicle to transport both payloads
(212)

Fig 5b

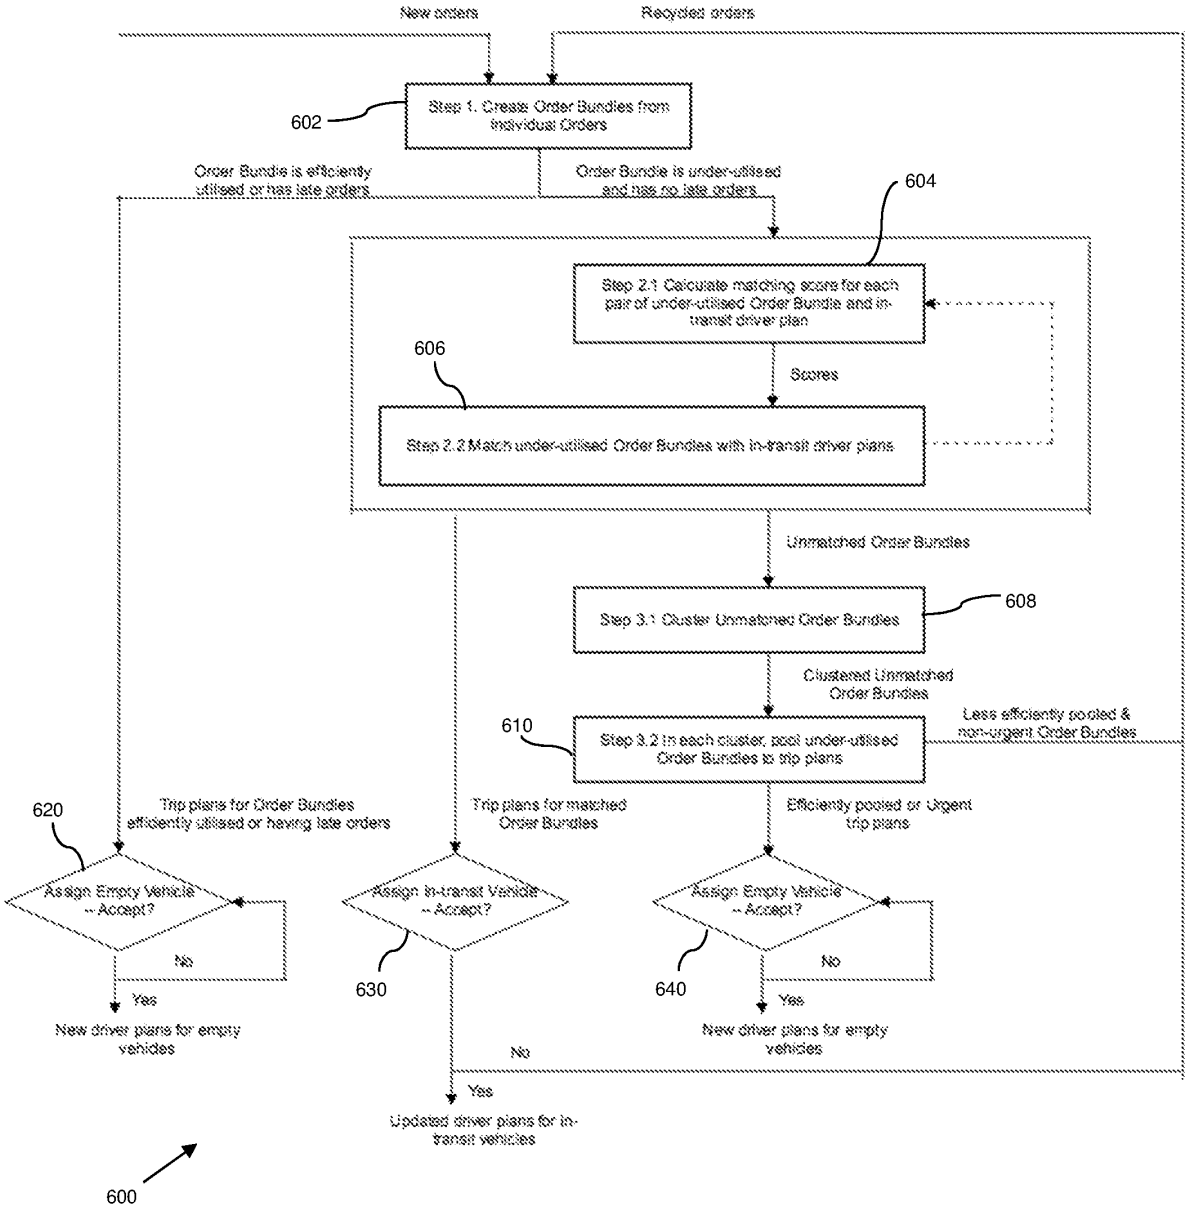

New orders
Recycled orders
602
Step 1: Create Order Bundles from Individual Orders
Order Bundle is efficiently utilised or has late orders
Order Bundle is under-utilised and has no late orders
604
Step 2.1 Calculate matching score for each pair of under-utilised Order Bundle and in-transit driver plan
606
Scores
Step 2.2 Match under-utilised Order Bundles with in-transit driver plans
Unmatched Order Bundles
608
Step 3.1 Cluster Unmatched Order Bundles
Clustered Unmatched Order Bundles
610
Step 3.2 In each cluster, pool under-utilised Order Bundles to trip plans
Less efficiently pooled & non-urgent Order Bundles
620
Trip plans for Order Bundles efficiently utilised or having late orders
Trip plans for matched Order Bundles
Efficiently pooled or Urgent trip plans
Assign Empty Vehicle – Accept?
No
Yes
New driver plans for empty vehicles
Assign In-transit Vehicle – Accept?
630
No
Yes
Updated driver plans for in-transit vehicles
Assign Empty Vehicle – Accept?
640
No
Yes
New driver plans for empty vehicles
