

GAME DEVICE PROVIDING CHANCE TO GENERATE MULTIPLE TIMES OF GAME RESULTS AFTER BETTING

Abstract

The present invention decides whether to generate a raise signal
5 by using a game processing unit to determine whether a game meets
a specified condition. If the raise signal is generated, a game result
generating unit to generate a game result with a specified quantity,
and the specified quantity is more than one. Accordingly, in one
round of the game, the game results are generated by the game result
10 generating unit to meet the demand of a player to obtain multiple
times of the game results in one bet, thus can speed up the game
process and increase the operating efficiency of the game.
