

Abstract

The invention relates to a lift system (1) comprising a lifting platform (11) for securing at a plurality of securing positions in a lift shaft (3) and at least one guide rail (12) for
5 vertically guiding a lift cabin (5) in the lift shaft (3), wherein the lifting platform (11) has a protective roof (21) which is designed to protect the lifting platform (11) against falling objects, wherein the protective roof (21) has a rail opening (39), through which the guide
rail (12) extends, wherein the protective roof (21) has a cover (43) for covering the rail opening (39), said cover having a cover opening (43) through which the guide rail (12)
10 extends.
