CLAIMS

1. An antifouling coating composition, comprising:

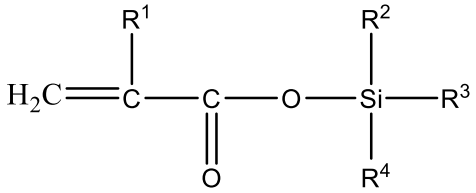

a copolymer P; and

an antifouling agent; wherein:

the copolymer P is a copolymer of a monomer (a), a monomer (b), a monomer (c), and an ethylenically unsaturated monomer (d) other than the monomers (a) to (c);

the monomer (a) is represented by general formula (1);

[chemical formula 1]

(1)

in the general formula (1), R^1 is a methyl group, each of R^2, R^3, and R^4 is an isopropyl group;

content of the monomer (a) is 25 to 50mass% with respect to a total mass of the monomers (a) to (d);

each of the monomer (b) and (c) is a monomer having a common logarithm log P of n-octanol/water partition coefficient P of 0.00 to 0.59 and 0.60 to 0.95;

the monomer (c) is a monomer having only one unsaturated bond.
