a meeting information storage to store the information input by the information input unit, in association with the identification information of the person to be watched.

3. The watching system according to claim 1,

wherein the portable information terminal collects the information in the information input card at a dwelling of the person to be watched where the visitor regularly visits, and stores the information acquired when the visitor directly meets the person to be watched at the dwelling, in association with the identification information of the person to be watched.

4. A watching system comprising:

an information input card to store answer information that a person to be watched personally operates and inputs with respect to a predetermined question item, in association with information on time at which an answer has been given; and

an information management device to perform close range wireless communication with the information input card, collect the information stored in the information input card, and store information that a visitor who has met the person to be watched has acquired by directly meeting the person to be watched in association with identification information of the person to be watched.

5. The watching system according to claim 4,

wherein the information management device stores the information in the information input card and the information acquired when the visitor directly meets the person to be watched at the designated place where the person to be watched regularly goes to meet the visitor.

6. The watching system according to claim 1,

wherein the information input card comprises:

a wireless communication unit to perform the close range wireless communication with the portable information terminal;

a plurality of buttons with which the person to be watched inputs the answer with respect to the question item; and

an in-card storage to store operation information of the plurality of buttons in association with the information on time at which the plurality of buttons has been operated.

7. The watching system according to claim 6,

wherein the plurality of buttons comprises a cancel button to instruct cancellation of press operation of an arbitrary button operated by the person to be watched just before, and

the in-card storage stores information on the effect that press information of the button pressed just before the cancel button has been pressed is cancelled when the cancel button is pressed.

8. The watching system according to claim 1,

wherein the information management device transmits at least part of information on the person to be watched, to a close relative of the individual person to be watched, based on the information stored in the portable information terminal and the information that the visitor has acquired by meeting the person to be watched.
