POLYMER PARTICLES AND USES THEREOF

Abstract

The present invention relates to polymer particles and uses thereof. The polymer particle may comprise a polymer selected from poly-beta-amino acids, polylactates, polythioesters and polyesters. In particular the present invention relates to functionalised polymer particles, processes of production and uses thereof. The methods, polymer particles and fusion proteins of the present invention have utility in diagnostics, protein production, biocatalyst immobilisation, and drug delivery.
