(54) Title: SYSTEM AND METHOD FOR ADAPTIVE INFORMATION DISSEMINATION

(57) Abstract: The present invention is to be used in any kind of distributed networks having different data rates on different connections between a centralized computer system and remote terminal. The central system comprises one or more supersets of data that is to be distributed to the remote terminals by extracting subsets of data from the superset/s of data. Thereafter the subsets of data are distributed to selected groups of remote terminals based on an infrastructure load. In this way an adaptive way of distributing data is executed.
