(54) Title: LID FOR A BEVERAGE CONTAINER

(57) Abstract: Some embodiments described herein are directed to a lid for beverage container having a lid body having a spout, a closure rotatably coupled to the lid body, a latch, and a lock disposed around the spout having a ring and an actuator. The closure can rotate between a closed position to cover the spout and an open position. The latch can move between a first position in which the latch engages with the closure in the closed position and a second position in which the latch does not engage with the closure. The ring can rotate around the spout between an unlocked position in which the button is allowed to move to the second position and a locked position in which the button is inhibited to move to the second position. The actuator extends from the ring and is accessible from a top surface of the lid body
