

【ABSTRACT】

The present specification relates to a cosmetic composition which is for improving the sebum-controlling ability of a UV-blocking agent, and contains bowl-shaped non-porous microparticles including a polymer matrix in which bis-ethylhexyloxyphenol methoxyphenyl triazine is stabilized. The present invention contains sparingly soluble bis-ethylhexyloxyphenol methoxyphenyl triazine in bowl-shaped microparticles, thus exhibiting an excellent ability to absorb sebum and a light and refreshing feeling when used.
