

CHAIR

ABSTRACT

Provided is a chair having a system in which, only when massage is performed on user's back, a massage mechanism housed inside a backrest is readily brought into contact with the back. The chair 1 comprises: the seat 2; the backrest 3 mounted at the rear of the seat 2 for supporting user's back; and the massage mechanism 17 incorporated in the backrest 3 for performing massage on the back of a user sitting on the seat 2. The support frame 11 is provided inside the backrest 3, and the massage mechanism 17 is disposed on the support frame 11 via the moving mechanism 28, and the moving mechanism 28 moves the massage mechanism 17 from a position where it is housed inside the backrest 3 to a position ahead of the backrest 3 to permit massage to user's back.
