(54) Title: SYSTEM AND METHOD FOR SUPPORTING MULTIPLE CERTIFICATE STATUS PROVIDERS ON A MOBILE COMMUNICATION DEVICE

(57) Abstract: A method and system for supporting multiple digital certificate status information providers are disclosed. An initial service request is prepared at a proxy system client module and sent to a proxy system service module operating at a proxy system. The proxy system prepares multiple service requests and sends the service requests to respective multiple digital certificate status information providers. One of the responses to the service requests received from the status information providers is selected, and a response to the initial service request is prepared and returned to the proxy system client module based on the selected response.
