

VOICE CHAT APPARATUS, VOICE CHAT METHOD, AND PROGRAM

[ABSTRACT]

Provided are a voice chat apparatus, a voice chat method, and a program that achieve appropriate control on whether or not to provide text obtained as a result of voice recognition on voice in voice chat. A voice receiving unit (44) receives voice in voice chat. A text acquiring unit (46) acquires text obtained as a result of voice recognition on the voice received by the voice receiving unit (44). A transmission control unit (52) controls, on a basis of whether or not display of a voice recognition result is performed in a voice chat system that is a communication destination, whether or not to transmit text data including the text acquired by the text acquiring unit (46) to the communication destination.
